Installation Notes

- **Partial List of compatible rigs:** FT-1000 MP/MK V, FT-920, FT-990, FT-847, ect.
- The default microphone gain is set to provide proper gain for most Yaesu rigs. Should you need to adjust the gain, open the case, by removing the small screws, and adjust the trim pot to achieve the desired gain.
- Some operating systems activate DTR automatically on boot, for this reason The EZ PSK is designed to key your rig on RTS only. Be sure to set your software for RTS.
- If you are not able to receive or transmit, check your Windows audio control panel and be sure the controls for the audio connections you are using are not muted and the level sliders are raised up from the bottom.
